

Association of Official Analytical Chemists (AOAC) International

AOAC was founded in 1884 as the Association of Official Agricultural Chemists, under the auspices of the U.S. Department of Agriculture (USDA), to adopt uniform methods of analysis for fertilizers. In the 21st Century AOAC INTERNATIONAL is committed to be a proactive, worldwide provider and facilitator in the development, use, and harmonization of validated analytical methods and laboratory quality assurance programs and services. Also, to serve as the primary resource for timely knowledge exchange, networking, and high-quality laboratory information for its members. To meet these goals, AOAC is focusing very closely on streamlining its methods review process and providing new methods in areas of increasing international interest, such as genetically modified organisms (GMOs) and nutraceuticals. The explosion of international accreditation as a requirement for participation in the global marketplace has given AOAC INTERNATIONAL an opportunity to seize a leadership role in developing criteria for laboratory accreditation.
